Why Select a Reinforced Burial Vault?

There are three types of burial receptacles: the dome container, the gravebox and the reinforced burial vault. A Wilbert lined burial vault will provide the best protection available for your loved ones. Years after you select a reinforced burial vault the integrity of the casket and the grave site will be intact. The Wilbert reinforced burial vault is made of the same concrete used for buildings. They are reinforced with a durable plastic or a combination of plastic and metal.

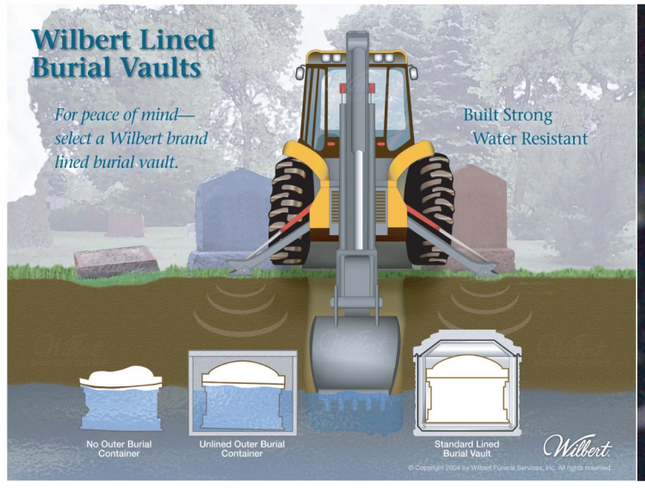
REINFORCED

FOR YEARS TO COME

PROTECTION



What is a Burial Vault?

A burial vault is a lined and sealed outer receptacle that houses the casket. A reinforced burial vault provides the casket with long-lasting protection against the elements and physical conditions such as ground water, heavy equipment and stacked burial sites. The burial vault also keeps the ground intact, preserving the beauty of the memorial park. Most cemeteries in British Columbia now require a burial vault.

British Columbia's Wilbert Licensee is Fraserway Prekast Ltd. All vaults are manufactured and constructed in the Langley manufacturing facility. Our onsite quality control ensures an uncompromised product.
